

Flexible horizontal flow wrapper

Easy to operate – pack details saved in machine’s memory

Model variations available

Maximised output

Better product presentation and fewer spills

The Malta 700 is a highly flexible horizontal bottom seal flow wrapper, forming bags from reels of film, then filling and sealing the bags in a single continuous operation.

Its ability to pack a wide variety of sizes, especially high products, combined with fast, on-machine adjustments, makes it ideal for companies needing the flexibility to cope with ongoing changes in product packaging specifications.

The Malta 700 is simple to operate, and offers a reliable solution in production operations where frequent changes in staff are a concern.

Technical Specification

<i>Dimensions</i>	5000mm x 965mm x 1520mm (l x w x h)
<i>Working height</i>	900mm
<i>Weight</i>	950kg
<i>Speed</i>	80-90 packs/min
<i>Product specification</i>	Length: 40-410mm Width: 10-280mm Sealing bar width: 300mm Height: 1-130mm
<i>Film reel specification</i>	Maximum width: 700mm Maximum diameter: 350mm Core diameter: 76mm
<i>Materials used</i>	Bi-oriented Polypropylene (BOPP), Rigid PVC, Complex materials, Laminated or co-extruded film
<i>Optional equipment</i>	Full construction in stainless steel Hot stamping printer Sealing bar with punch device Double reel holder Driven roller for film dragging Pre-heating roller set for longitudinal sealing for high speed applications Different cross sealing and cutting versions Automatic feeding systems Delicate product support and transport systems Film perforation system
<i>Electrical supply</i>	3.1kW, 220V single phase

Key features

- **Automatic stop** – if sealing bars become blocked
- **Adjustable sealing bar height** – for varying product sizes
- **Adjustable folding box and film gusseting device** – fast & easy set up of different pack types
- **Tough frame** – all parts in contact with product made from stainless steel
- **20 memory settings**
- **800mm discharge conveyor belt**
